

**Lab 03 (Week 5, Oct 18<sup>st</sup>)**  
CA119 & CA218

Use classicmodels:

Q1. From the orderdetails table, list the total amount and the number of different types of product in each order.

Q2. List the count of the orders shipped for each customer. Order by times of order from highest to lowest.

Q3. Count the number of shipped orders made by customer 350.

Q4. List all the customers that made more shipped orders than customer 350.  
(this is your first nested query)
