Lab 05 (Week 7, Nov 1st)
CA119 & CA218

Use the world schema

Q1. Using a Join, list the names and populations of the cities where English is the *official* language spoken.

Q2. Using a Join, list the names and populations of each city within each country, clearly showing both the names and populations of both the cities and countries. Also, show the percentage of the country population each city contains.

Use classicmodels.

Q3. List the customer's name, number, full details of all orders and payment amounts of customers who have spent more on an order than any order made by the customer called Signal Gift Stores.
(Hint: Will be a join but not a natural join)

Q4. List the customer name and the full names of the contact person from all customers who have never placed an order.
